

Resolute IT provides three core services that reside under the umbrella of **Managed Services**, which is the proactive maintenance of your systems to keep them always up and running.

- Office 365 Consulting
- Digital Telephony Services (VoIP)
- Workspace as a Service (WaaS)

First on the list is **Office365**. Microsoft has changed its pricing structure to the subscription method for its most popular desktop productivity suite and various Office 365 plans. Our job is to take your current office infrastructure and its data and then migrate everything completely to the Microsoft cloud – their secure network of datacenters located around the globe. The improved bottom-line result for your company stems from higher productivity through team-focused collaboration.

Voice has gone digital, just like everything else. Voice over Internet Protocol (VoIP) has become the de facto standard. As it enters the Small to Medium Business (SMB) market in the 5-50+ seat range, costs can be significantly reduced, while features and functionality can be greatly enhanced.

Access your desktop workspace from anywhere using any device at any time with WaaS. Whether from a Windows, Mac, Linux, Android or iOS device, your workers become more productive while maintaining: security; compliancy; redundancy; and performance. Prevents ransomware!
